IPC Code: **A61K 35/78;**

Priority Number: **Dec. 24, 1980 JP1980000184368**

Abstract:

PURPOSE: To prepare a low-toxic antiviral agent effective to viral diseases such as influenza, hepatitis, etc., by using polysaccharides and water-soluble lignin obtained from true grasses such as bagasse, as active components.

CONSTITUTION: The objective agent contains, as active components, polysaccharides and water-soluble lignin extracted from true grasses (e.g. bagasse, corn, rice straw, wheat straw, bamboo, etc.), esp. bagasse. The extraction of the active components can be carried out by boiling or enzymatic treatment, and the latter method is preferable for industrial use. Since the polysaccharides and the water-soluble lignin existing in bagasse etc. have antiviral effect irrespective of the presence of mycelia, it is not necessary to culture the mycelia particularly, and the agent can be prepared quite easily at a low cost.
